ASHLEY TARASEN, MD - Medical Director

CLIA ID: 05D2045519 CAP ID: 8859615

> 8158 Beverly Blvd, Los Angeles, CA 90048

P: 424.245.PATH (7284) | F: 323.944.0639

ACCESSION #

M2021-039867

Collection Date:

02-25-2021

Patient Name: BAPAT, MUGDHA PRAKASH

DOB: 03-05-1985

Submitted By: Dawn Terashita, MD

Sex: F

Age: 36

Location Code: PASSPORTHLA

Patient Phone: (818) 913-4463

Received Date: 02-25-2021

Source: Nasopharyngeal Swab

Gross Description: Received one swab in 2mL of saline solution

Clinical Information: Z03.818 COLLECTION DATE 2/25/2021 TIME 1050A

MOLECULAR REPORT

SARS-CoV-2 RNA, RT-PCR

Result: Not Detected

Result Interpretation:

A DETECTED (POSITIVE) result indicates the presence of SARS-CoV-2 RNA in the sample tested. Nucleic acid may persist even after the virus is no longer viable. Clinical correlation with patient history and other diagnostic information is necessary to determine patient infection status.

A Not Detected (Negative) result indicates SARS-CoV-2 RNA was not present in the specimen or was below the limit of detection. A Not Detected result does not preclude COVID-19 infections and should not be used as the sole basis for treatment or patient management decisions. If COVID-19 is still suspected, based on exposure history together with other clinical findings, re-testing should be considered in consultation with public health authorities. Laboratory test results should always be considered in the context of clinical observations and epidemiological data in making a final diagnosis and patient management decisions.

An INVALID result indicates that there was an error in the generation of the result. The sample has been tested 2 times and the results remain Invalid. If COVID-19 is still suspected, based on exposure history together with other clinical findings, re-testing should be considered.

Methodology: This test was performed using RT-PCR methodologies and has been authorized by the FDA under an Emergency Use Authorization (EUA) for use by authorized laboratories.
